

\$0 Down Commercial Lease – 50kW Solar Electric System 1-Day Payback

(August, 2011 - Lewiston, NY) Home Star Solar announces a ‘\$0 Down Commercial Lease’ is now available for their 50kW solar electric system. The lease is ideally suited to privately held Western NY commercial businesses with electric bills over \$10,000/year. The \$0 down lease results in a 1-Day payback.

The standardized 50kW system is available for \$0 down with a fixed monthly payment of \$604. The solar energy system reduces the electric bill an average of \$677/month, resulting in an immediate savings of 11%. Additionally, unlike electric utility rates, the low lease payment is locked in for the 20 year term of the lease - eliminating variability and inflationary costs for businesses.

Ken Siddall, president of Home Star Solar, commented *“We’re excited to be able to eliminate the upfront cost of solar for our customers. Plus, our customer’s risk is eliminated because the system is warranted for the entire lease term and power output is guaranteed in writing”*. Mr. Siddall continued, *“In addition to the immediate cost savings, businesses also realize the intangible benefits of marketing ‘green buildings’ to customers and employees.”*

The graph below shows the amount of utility power offset by a 50kW solar power system.

To explore if a \$0 Down Solar Lease is right for your business – simply contact Home Star Solar for a no obligation 30 minute consultation. We’ll answer questions, evaluate your building structure and electric system, propose a design that meets your aesthetic requirements, and we’ll outline the many tangible and intangible benefits of a \$0 down commercial lease.
